

JAYPEE UNIVERSITY OF INFORMATION TECHNOLOGY, WAKNAGHAT

TEST -3 EXAMINATIONS- 2026

B. Tech.-III Semester (IT-Backlog)

COURSE CODE (CREDITS): 18B11MA313 (3)

MAX MARKS: 35

COURSE NAME: PROBABILITY AND STATISTICS

COURSE INSTRUCTOR: SST

MAX. TIME: 2 Hours

*Note: (a) All questions are compulsory.**(b) The candidate is allowed to make suitable numeric assumptions wherever required for solving problems.**(c) Use of a scientific calculator is allowed.*

Q. No.	Question	CO	Marks																				
Q1	An aircraft maintenance company bought equipment for detecting structural defects in aircrafts. Tests indicate that 95 % of the time the equipment detects defects when they actually exist, and 1 % of the time it gives a false alarm that indicates the presence of a structural defect when in fact there is none. If 3 % of the aircrafts actually have structural defects, what is the probability that an aircraft actually has a structural defect given that the equipment indicates that it has a structural defect?	1	5																				
Q2	The probability mass function of the number N of customers that arrive at a local library within a one-hour interval is defined by, $p_N(n) = \begin{cases} \frac{5^n}{n!} e^{-5} & n = 0, 1, \dots \\ 0 & \text{otherwise} \end{cases}$ What is the probability that at most two customers arrive at the library within one hour?	2	5																				
Q3	Calculate Karl Pearson's coefficient of correlation for the following data, where response y is the acid content of material produced by titration, whereas the regressor x is the organic acid content produced by extraction and weighing. <table><tr><td>x</td><td>109</td><td>48</td><td>138</td><td>164</td><td>28</td></tr><tr><td>y</td><td>70</td><td>37</td><td>82</td><td>88</td><td>43</td></tr></table>	x	109	48	138	164	28	y	70	37	82	88	43	4	5								
x	109	48	138	164	28																		
y	70	37	82	88	43																		
Q4	The grades of a class of 9 students on a midterm report (x) and on the final examination (y) are as follows: <table><tr><td>x</td><td>77</td><td>50</td><td>71</td><td>72</td><td>81</td><td>94</td><td>96</td><td>99</td><td>67</td></tr><tr><td>y</td><td>82</td><td>66</td><td>78</td><td>34</td><td>47</td><td>85</td><td>99</td><td>99</td><td>68</td></tr></table> Estimate the linear regression line.	x	77	50	71	72	81	94	96	99	67	y	82	66	78	34	47	85	99	99	68	4	5
x	77	50	71	72	81	94	96	99	67														
y	82	66	78	34	47	85	99	99	68														

Q5	Fit a straight line of the form $y = a + bx$, to the following data, using the method of least squares:	4	5														
	<table><tr><td>x</td><td>2</td><td>7</td><td>9</td><td>1</td><td>5</td><td>12</td></tr><tr><td>y</td><td>13</td><td>24</td><td>23</td><td>14</td><td>15</td><td>21</td></tr></table>	x	2	7	9	1	5	12	y	13	24	23	14	15	21		
x	2	7	9	1	5	12											
y	13	24	23	14	15	21											
Q6	A beverage company claims that the average sugar content in its soft drink bottles is 50 grams. A random sample of 10 bottles is tested, and the sugar contents (in grams) are found to be: 48, 52, 47, 49, 51, 46, 50, 53, 49, 48 At a 5% level of significance, test whether the company's claim is valid using a one-sample t-test.	5	5														
Q7	A random sample of 90 adults is classified according to gender and the screentime during a week: <table><tr><td></td><th colspan="2">Gender</th></tr><tr><td></td><th>Male</th><th>Female</th></tr><tr><td>Over 25 hours</td><td>15</td><td>29</td></tr><tr><td>Under 25 hours</td><td>27</td><td>19</td></tr></table> Use a 0.05 level of significance and test the hypothesis that the screentime is independent of whether the viewer is male or female.		Gender			Male	Female	Over 25 hours	15	29	Under 25 hours	27	19	5	5		
	Gender																
	Male	Female															
Over 25 hours	15	29															
Under 25 hours	27	19															

Parts of Useful Statistical Tables:

Table A.5 (continued) Critical Values of the Chi-Squared Distribution

v	α									
	0.30	0.25	0.20	0.10	0.05	0.025	0.02	0.01	0.005	0.001
1	1.074	1.323	1.642	2.706	3.841	5.024	5.412	6.635	7.879	10.827
2	2.408	2.773	3.219	4.605	5.991	7.378	7.824	9.210	10.597	13.815
3	3.665	4.108	4.642	6.251	7.815	9.348	9.837	11.345	12.838	16.266

Table A.4 Critical Values of the t -Distribution

v	α						
	0.40	0.30	0.20	0.15	0.10	0.05	0.025
1	0.325	0.727	1.376	1.963	3.078	6.314	12.706
